

Carpet Cleaning Processes

PCS carpet cleaning processes are easy to follow and effective at maintaining today's modern carpet fibres. PCS carpet cleaning processes utilize PCS Process MicroClean and PCS Process MicroLaundry.

Carpet Spotting Process

Dilute MicroClean 1 part cleaner to 256 parts water. You may either place diluted solution in bucket or in a sprayer.

If solution is sprayed on carpet use a dry PCS microfibre cloth and wipe over carpet surface. The PCS microfibre cloth will absorb carpet soils. Repeat if needed using a new PCS microfibre cloth.

If using diluted solution in a bucket, place a PCS micro fiber cloth in solution and wring out so cloth is just damp. Wipe over surface, occasionally rinsing cloth in diluted solution and wringing cloth out so it is just damp. Continue until soil and stain is visually removed from carpet.

Low Moisture Carpet Cleaning Process.

Low moisture carpet cleaning is the transfer of soils from carpet surface to either a low moisture carpet extractor or to a surface of a carpet pad.

PCS Low Moisture carpet cleaning uses PCS Process MicroClean diluted 1 part cleaner to 256 parts water. If using low moisture carpet cleaning extraction follow manufacturers instruction for cleaning procedure.

Carpet bonnet or pad cleaning.

Carpet bonnet pad cleaning is a process of transferring carpet soils from carpet to the carpet pad or bonnet. Lightly spray carpet and apply a small amount of solution to carpet bonnet. Run machine over carpet with overlapping passes. Change bonnet frequently. Bonnet pads require frequent washing use PCS MicroLaundry.

Deep Cleaning Carpet Process.

Deep cleaning of carpets is the more thorough removal of deeply impeded carpet soils which requires following a process to achieve consistent results.

Dilute MicroLaundry 60 ml/2ounces per gallon of water and place in pump up sprayer or pre spray machine.

Dry vacuum carpet first. Spray all traffic and impeded soiled areas. Allow to dwell for at least 5 minutes. Agitate the nap to insure MicroLaundry solution contacts all sides of carpet nap.

Rinse extract with MicroClean diluted 1 part cleaner to 256 parts hot water. ½ ounce/ 15 mls per gallon of water.

The PCS carpet methods and products contain and therefore leaves no synthetic chemicals in the environment or in carpets.

PCS MicroClean and MicroLaundry are designed and certified for use around chemically hypersensitive individuals.
