A FRESH APPROACH TO CLEANING

Process D Cleaning, Decontaminating and charging your cotton and micro fiber cloths and mops with MicroClean all in the washing machine.

Using the PCS process allows for effective and validated cleaning of cloths and the addition of MicroClean an all natural organic cleaner that when added to rinse cycle absorbs onto the fabric and during the drying cycle converts the cloths and mops into dirt magnets enhancing their ability to loosen and pick up soils.

Cloths and mops treated with MicroClean are ready to clean without any additional cleaning chemicals .

All you do is add warm water and clean

- Works equally well on cotton and micro fiber cloths.
- Eliminates the need to mix chemicals in the work place
- No need for costly chemical dispensers and the need to service them.
- Allows cleaning staff to focus on cleaning to protect public health.

Directions for household machine use:

- Top loading machines - add two caps per load of MicroLaundry and 250mL of Distainer
- High efficiency machines - add one cap per load of MicroLaundry and 125mL of Distainer
- Wash on sani cycle or hot water with an extra rinse cycle.

To condition microfibre and cotton cloths with MicroClean

- Add 60mL/2oz. of Micro Clean to 20 cloths in final rinse
- Dry Thoroughly
